

Furniture Industry

The integration of audio systems in household furnitures is gaining more and more in importance so that our acoustic textiles are increasingly used here. Because receivers, amplifiers and DVD or blue ray players are also integrated in cabinets we offer fabrics which are distinguished in addition to their high acoustic quality by ultrasonic and infrared transmittance.

In the area of interior design we offer sound-absorbing fabrics which are used for the covering of sound absorbers, partition walls, mobile screens, shelf walls, acoustic cabins or acoustic niches.

Also in this area roma offers the covering

of different furnitures and furniture parts with fabrics.

Fabric Covering

In a special department we cover grilles, frames and panels made of plastic, metal or wood with fabric.

For the covering we use three techniques:

- Glueing with special adhesives
- Welding by hot stamps
- Ultrasonic welding

Thus, we can meet all customer requirements on the individual manual prototype and small batch production to industrial mass production.

Acoustic
Textiles

Company

The company „roma-knitted-fabrics“ has been founded in 1958. The base of the company success is the consequent customer orientation, the competent technical advisement and the reliable customer service. The permanent improvement of all business fields including processes and personal is resulting in high quality products which satisfy the needs of our customers.

roma is specialised on the production of synthetic fabrics and has a modern machinery with 40 circular knitting machines, single-unit- and double-cylinder machines, Jacquard- and Minijacquard-machines up to full electronic machines.

The product areas are on the one hand knitted fabrics for ladies wear and work wear and on the other hand technical textiles mainly for the automotive industry, consumer electronics and interior design. In the area of technical textiles we offer as additional service the covering of grilles, frames and panels made of plastic, metal or wood with our fabrics.

Acoustic Textiles

In the area of technical textiles roma develops and produces acoustic fabrics which are characterized by a very good sound permeability and by a simultaneous view density. Our customers can choose between different designs, structures and colours from our fabric collection of 200 acoustic textiles. Beyond this we offer our customers to develop new fabric qualities together with them and according to their wishes.

roma also offers sound absorbing fabrics. We can realize your wishes of graphical design.

Consumer Electronics

In the field of consumer electronics the acoustic textiles of roma are used for the covering of loudspeaker grilles and frames of sound systems and television sets. The leading producers of loudspeakers and television sets in Europe are our customers.

Besides the production and delivery of fabrics we also offer the covering of loudspeaker grilles with our fabrics, the assembling and testing of loudspeakers and the total assembling of dolby-surround systems.

Automotive Industry

For the automotive industry roma produces fabrics for the interior of cars which fulfill the high quality requirements of this branche especially the high color and light fastnesses. Our fabrics are used for the cloth covering of different parts of car interiors such as door side panels, pillars, rear shelves or headliners.

In the automotive industry our acoustic textiles are used for the covering of loudspeaker grilles in dashboards, doors, center consoles, pillars and rear shelves.

Our customers in this area are on the one hand the leading German automotive manufacturers and on the other hand leading European automotive components suppliers. Also here we do the covering of the loudspeaker grilles with our fabrics.
